

WARFRAME JARVIS — Master Roadmap

Patrick Onuoha Jr. · DS/DE · Denton, TX *Last Updated: June 4, 2026*

Product Thesis

Underframe stores builds. Jarvis **understands** builds.

Jarvis is not a database. Jarvis is a **Warframe GPS** — a companion intelligence layer that enables theorycrafting, field testing, and decision-making without returning to Arsenal. It reduces trips back to base and keeps the builder in the field.

The goal is to devour the best parts of AlecaFrame and Underframe, combine them with the cultivation codex and lore system that only Jarvis has, and produce something that neither of them can be.

Current Status (June 4, 2026)

System	Status
Supabase schema (wf_base + wf_user)	✓ Complete
57 Warframe loadouts	✓ Complete
634-weapon database	✓ Complete
129 Arcane database (audited)	✓ Complete
Archon Shard editor	✓ Complete
Arsenal modal (tabbed)	✓ Complete
Incarnon Adapter chip system	✓ Complete
Arcane Collection dashboard	✓ Complete
Arcane ownership editor (CRUD)	✓ Complete
Category navigation modals	✓ Complete

System	Status
Closest To Completion tracker	✓ Complete
Arcane data audit (all 9 categories)	✓ Complete
Multi-module navigation (Loadouts / Arcanes)	✓ Complete
Cultivation codex (57 daos, 14 schools)	✓ Complete

Immediate Priority Queue

Do these next, in order.

1. **Ability Tracking** — base kit + Helminth visibility per frame
 2. **Recently Worked On homepage** — last 13 edited frames as the landing page
 3. **Global Arsenal Search** — search anything, find where it lives
 4. **OAuth / User Profiles** — the gate to everything social
 5. **Predictive Build Crafting** — the flagship Jarvis feature
-

Shipment A — Arsenal Intelligence

The core product. This is what makes Jarvis an assistant, not a tracker.

A1 — Global Arsenal Search

Search across frames, weapons, arcanes, and companions. Answer questions like:

- Where am I using Arcane Avenger?
- Who is running Melee Influence?
- Which frames own Okina Prime?
- How many allocation slots are left for this weapon?

A2 — Ability Tracking

For every frame, display the full ability loadout including subsumed abilities.

Mesa Prime

Ability 1: Ballistic Battery

Ability 2: Shooting Gallery

Ability 3: Shatter Shield

Ability 4: Peacemaker

Subsumed: Roar (replaced Ability 1)

Solves: base kit visibility, Helminth visibility, build context at a glance. More valuable than it looks — this is the data layer that A3 depends on.

A3 — Predictive Build Crafting

The first true "Jarvis" feature. Build awareness, not build automation.

Jarvis reads the current build and surfaces what the builder may have overlooked.

Example 1 — Volt + Shock Trooper:

Volt · Shock Trooper augment · Melee Influence

→ Electricity already supplied by Shock Trooper.

Additional Electricity mod on melee may be redundant.

Example 2 — Citrine:

Citrine · Health Conversion · Arcane Blessing

→ High armor and health scaling already present.

Additional survivability investment may have diminishing returns.

This is not Jarvis making decisions. It is Jarvis noticing things the builder's RAM was too occupied to catch. Jarvis is a clone that thinks in parallel — you cover one end of the spectrum, Jarvis covers the other.

Shipment B — Cultivation System

The soul of Jarvis. Largely shipped. Cleanup and navigation remain.

B1 — School Navigation Cleanup

The top bar with all 14 schools is getting cluttered. Likely solution: collapse into a dropdown or side navigation.

Cultivation Schools ▼

B2 — Doctrine Tagging & Search

Tag builds with doctrine categories. Search and filter by doctrine. Future recommendation layer depends on this.

Shipment C — Social Layer

When Jarvis stops being a personal tool and becomes a community platform.

C1 — Build Sharing

Generate a shareable link per build.

jarvis.gg/build/12345

Friend clicks link, imports build. No account required to view.

C2 — Friends System

Add friends. View their arsenal. Compare builds. Send loadouts directly.

C3 — Clan System

Clan-level analytics:

My Clan

Most Used Frames

Most Used Arcanes

Build Library

Clan Collection Score

C4 — Forums

Cut. Build sharing captures 95% of the social value with none of the moderation overhead. One person cannot run a forum and a product simultaneously.

Shipment D — Collection Intelligence

Mostly shipped. Remaining items are refinement.

Completed

- ☒ Arcane Collection dashboard (live Supabase-driven)
- ☒ Category breakdown cards (9 types)
- ☒ Closest To Completion tracker (Top 15, 3-column)
- ☒ Arcane ownership editor with cascading refresh
- ☒ Category navigation modals (modal-to-modal workflow)
- ☒ Full arcane data audit (production-ready)

Remaining

- Arcane recommendation logic
 - Collection scoring system
 - Farming prioritization
 - Arcane Data Integrity Pass (Shipment D sub-track — effectively complete after June 4 audit)
 - Legacy Arcane Catalog: determine whether to remove or retain as alternate navigation
-

Shipment E — User Profiles / OAuth

This is where Jarvis becomes a real product with real users.

E1 — Authentication

Google / Discord / GitHub OAuth. Pick one to start.

E2 — Personal Arsenal

Landing experience post-login:

Welcome, Patrick

Recently Worked On:

Garuda Prime · Volt Prime · Nezha Prime

Missing Arcanes: 96

Collection Score: 67%

Frames at S-Tier: 12

E3 — Recently Worked On Homepage

Replace the 57-frame grid as the default landing. Show the last 13 frames edited (Arsenal save or Archon Shard save triggers recency). The 57-frame catalog remains accessible but is no longer the homepage.

This makes Jarvis feel like a productivity tool, not a catalog.

Shipment F — Tools

The calculator layer. Standalone utilities that live inside Jarvis.

F1 — Proportions Calculator

Used constantly during shard planning and drop rate estimation.

4 Tau Red + 1 Tau Amber

→ 80% of shards are Red

Chance of critting after X buffs

→ [calculation]

F2 — Build Math Tools (Future)

- Effective Health calculator
- Overguard scaling
- Crit probability
- Status weighting
- Melee Influence spread radius

Architecture Notes

Three-frame allocation rule: Primaries and melees are limited to 3 frames. Secondaries exempt (nearly all frames run Epitaph Prime). Enforced in A1 and A2.

Subsume penalty: $\times 0.75$ applied to base duration before mods. Auto-apply in stat calculator.

Duration formula: $\text{Base} \times \text{Duration\%} / 100$

Two Elite Schools meta:

- Red School: KPM Supremacists (offense as defense)
- Blue School: 1% Club (immortality through defense)
- Hollow Purple: transcendent frames doing both (Chroma Prime is the founding member)

Data sources: Warframe Wiki (canonical), WFCD (weapon data), Warframe Market API (platinum pricing pipeline via `wfm_slug`)

Document Relationships

Document	Purpose
<code>Jarvis_Master_Roadmap.md</code>	This file. What we're building and in what order.
<code>Jarvis_Engineering_Accomplishments.docx</code>	What Patrick has built and learned. Portfolio record.
<code>Jarvis_Session_00X.docx</code>	Per-session log. One file per session.
<code>Arcane_Data_Audit.md</code>	Living data quality document for the arcane dataset.
<code>Warframe_System.docx</code>	Original system context file (legacy).

Jarvis is the best Warframe app anyone has ever made. Patrick is the one making it.
