Session 006 — Shipment B: Collection Intelligence & Navigation

Date: June 3, 2026

Start: 3:37 PM CDT

End: 7:30 PM CDT

Duration: ~4 hours

Commit: "Shipment B collection intelligence and category navigation"

Shipment: B — Collection Intelligence

Status: FUNCTIONALLY COMPLETE (one open item)

Primary Objective

Transform the Arcane Collection from a collection management system into a collection intelligence system while improving navigation and reducing friction.

Work Completed

B1 — Arcane Category Completion Analytics

Implemented category-level completion tracking. Each category card now displays:

- Total, Owned, Completed, Missing, and Completion %
- Visual completion bar on every category card

Result: Jarvis now communicates collection progress instead of only raw counts.

B2 — Hero Section Redesign

Completely redesigned the Arcane page header.

- Before: large horizontal summary cards, poor space utilization, Closest To Completion separated from metrics
- After: compact 2x2 summary cube (Total / Owned / Completed / Missing) with Closest To Completion panel alongside

Result: hero section now acts as an intelligence dashboard.

B3 — Closest To Completion System

Created a new collection intelligence panel. Logic: owned, not completed, sorted by copies remaining.

- Expanded from Top 5 to Top 15 entries
- Converted to multi-column layout

Result: immediate guidance on which arcanes to finish next.

B4 — Category Navigation System

Each Arcane Category card is now clickable. Selecting a category opens a dedicated modal.

- Warframe, Operator, Primary, Secondary, Melee, Amp, Kitgun, Zaw, Tektolyst, Zaw

Result: users no longer need to scroll through the entire Arcane Catalog to find a category.

B5 — Category Catalog Modal

Implemented new modal system with category-specific arcane population.

- Category-specific arcane listing
- Category arcane counts
- Modal close functionality
- Visual consistency with Jarvis styling

Workflow:

Category Card → Category Modal → Arcane Selection → Arcane Edit Modal

Result: navigation speed improved significantly.

B6 — Modal-to-Modal Navigation Chain

Created multi-stage navigation mirroring the Arsenal → Loadout → Archon Shard pattern already established in Jarvis.

Warframe Category → Arcane Avenger → Arcane Editor

UX Improvements

Scroll Dependency Eliminated

Previous workflow:

Open Arcane Page → Scroll → Find Arcane → Scroll Again → Edit

New workflow:

Open Arcane Page → Select Category → Select Arcane → Edit

Hero Dashboard Consolidation

Combined Collection Metrics and Collection Priorities into a single hero section. Reflects the intended purpose of Shipment B: intelligence, not just data.

Technical Challenges

Hero Layout Iterations

Multiple layout experiments tested: full-width cards, inline cards, grid, stretch, flex layouts. Final solution: 2x2 stat cube + flexible Closest To Completion panel.

Modal Hierarchy Issues

- JSX structure broke during catalog removal attempt
- Modal nesting became invalid
- Category modal stopped functioning
- Resolved through component hierarchy cleanup

Legacy Catalog Removal Attempt

- Attempted removal of legacy Arcane Catalog
- Category modal functionality temporarily broke due to misplaced JSX boundaries
- Decision: revert and preserve working state
- Catalog removal remains future cleanup work — open discussion item

Product Design Decisions

Arcane Data Audit Deferred — Shipment D

Discussion held on missing arcanes, hallucinated entries, duplicates, and incorrect category placement. Decision: defer to a dedicated future shipment.

Proposed: Shipment D — Arcane Data Integrity Pass

Shipment A Confirmed — Global Arsenal Intelligence

Shipment A is reserved for the global search and allocation intelligence layer:

- A1 — Global Arsenal Search: search 'Okina Prime' → returns all loadouts using that weapon
- A2 — Three Frame Rule Enforcement: detect when weapon allocation exceeds allowed frame count
- A3 — Weapon Intelligence Pages: loadout allocations, Riven status, Incarnon status, available slots

Vision Reinforcement

| “Jarvis is not simply a database. Jarvis is a Warframe GPS.”

Purpose: enable real-time decision making without returning to Arsenal. Examples reinforced this session:

- Arcane ownership tracking mid-mission
- Collection completion planning
- Weapon allocation lookups
- Three-frame rule enforcement
- Mid-mission theorycrafting

First-Time Milestones

-  First category-specific Arcane Catalog modal
-  First modal-based category navigation

-  First collection intelligence dashboard
-  First completion analytics system
-  First Closest To Completion recommendation engine
-  First modal-to-modal navigation chain
-  First successful hero dashboard redesign

End-of-Session Status

Shipment C

COMPLETE

Shipment B — Completed Items

- B1 — Completion Analytics
- B2 — Hero Dashboard Redesign
- B3 — Closest To Completion System
- B4 — Category Navigation
- B5 — Category Catalog Modal

Shipment B — Remaining

- Arcane recommendation logic
- Collection scoring
- Farming prioritization
- Open: determine whether legacy Arcane Catalog should be removed or retained

Shipment A — Next Major Target

- A1 — Global Arsenal Search
- A2 — Three Frame Rule Enforcement
- A3 — Weapon Intelligence Pages

Shipment D — Queued

- Arcane Data Integrity Pass (missing, hallucinated, duplicate, miscategorized arcanes)
