Session 007 — Arcane Database Audit & UI Refinement

Date: June 4, 2026

Location: Offsite — laptop session

Duration: Shorter than usual; offsite constraints

Status: SHIPPED

Context

Undocumented session completed offsite on a laptop. Work was substantial enough to warrant its own session number. Two parallel tracks: a full Arcane database audit (data engineering) and continued Arcane page UI refinement (frontend).

Data Engineering — Full Arcane Database Audit

This is a milestone-tier accomplishment. Manually audited every Arcane category against in-game and wiki sources.

What Was Done

- Audited all 9 arcane categories: Warframe, Operator, Amp, Primary, Secondary, Melee, Kitgun, Zaw, Tektolyst
- Fixed incorrect classifications across all categories
- Added missing arcane records
- Removed invalid records
- Corrected rank structures
- Verified Eternal = R5
- Verified Virtuos = R3
- Verified Residual and Pax arcane structures
- Validated all category counts against official game sources

Outcome

Jarvis now contains a curated Arcane database that has been manually audited category-by-category against in-game and wiki sources. The Arcane data layer is considered production-ready and suitable as a source of truth for future collection tracking, farming recommendations, and Jarvis intelligence features.

Why This Ranks as a Milestone

Most projects seed data and move on. This session went back into production, traced every category against authoritative sources, corrected the taxonomy, and produced a clean, verified dataset. Same standard expected in a professional DE role. Patrick ranked it alongside the cultivation school system and the shard goal tracking system — and that ranking is correct.

UI — Arcane Page Refinements

- Reworked Arcane hero section
- Added Closest To Completion card
- Converted closest list into 3-column layout
- Added category click functionality
- Built category popup modal
- Removed need to scroll to Arcane Catalog
- Preserved Arcane Detail modal functionality

End-of-Session Status

Arcane Data Layer

PRODUCTION-READY — Audited and verified against official sources.

Shipment B

Functionally complete. Legacy catalog removal remains an open discussion item.

Next Targets

- Remaining Shipment B items: collection scoring, farming prioritization, arcane recommendation logic
- Shipment A: Global Arsenal Search, Three Frame Rule, Weapon Intelligence Pages
- Shipment D (queued): Arcane Data Integrity Pass — now effectively complete
