

WARFRAME JARVIS

Master Session Log · Tactical Doctrine OS · Personal Build Intelligence Platform

Stack: React + Vite + Tailwind | Supabase Postgres | Python ETL | 634 weapons seeded
Repo: PatrickOnuohaJr | PM: Claude | Dev: ChatGPT + Claude
Identity: Cinematic cultivation codex system — not a build tracker, not a CRUD app.

Navigation Architecture

Home (catalog) → Cinematic Detail Page → Edit Arsenal / Edit Archon Shards
Homepage = command center (browse only). Frame detail page = operational workspace (all editing).

Feature Status

FEATURE	STATUS
Basic frame cards	COMPLETE
Current + Goal shard editing	COMPLETE
Goal persistence	COMPLETE
Copy Goal → Current	COMPLETE
Copy Goal → Another Frame	COMPLETE
School visual system + SCHOOL_ICONS	COMPLETE
Cinematic detail overlay	COMPLETE
Contextual editing (detail page only)	COMPLETE
Edit Arsenal (inside detail page)	COMPLETE
Edit Archon Shards (inside detail page)	COMPLETE
Immediate tier updates	COMPLETE
Cultivation doctrine rendering	COMPLETE
School filter bar	COMPLETE
Cultivation color ETL (54/57 frames)	COMPLETE
Weapon DB — 634 weapons seeded	COMPLETE
WeaponInput autocomplete component	COMPLETE
useWeapons hook	COMPLETE
Keyboard nav in autocomplete	COMPLETE
Native Incarnon flagging	COMPLETE
Arcane autocomplete	IN PROGRESS
Melee arcane integration	IN PROGRESS

Incarnon toggle architecture	IN PROGRESS
Shard buff metadata system	IN PROGRESS
School page navigation	PLANNED
Phase 5 — Enhanced Autocomplete	PLANNED
Phase 6 — Intelligent Weapon Ranking	PLANNED
Phase 7 — Doctrine Intelligence	PLANNED
Phase 8 — Predictive Search	PLANNED
KPM dashboard	PLANNED
AI build advisor (Jarvis)	PLANNED
Mobile optimization	NOT STARTED

Next Priority Queue

#	TASK
1	Remove top-right edit buttons — click-panel-to-edit UX instead
2	Arcane autocomplete + melee arcane field
3	Incarnon toggle system (base weapon + toggle state)
4	Shard buff metadata architecture decision
5	School navigation pages — architecture TBD
6	KPM dashboard — session log + Hayden Tenno baseline
7	Doctrine intelligence layer — weak build detection
8	Recommendation engine + analytics layer
9	AI build advisor (Jarvis layer)
10	Mobile optimization

Roadmap

PHASE	NAME	SCOPE
■ Ph1	Database + ETL	Supabase schema, 57 frames from Excel.
■ Ph2	Catalog UI	Cards, shards, school identity, cinematic detail page.
Ph3	KPM Dashboard	Session log, Hayden Tenno baseline.
■ Ph4	Weapon DB	634 weapons, autocomplete, Incarnon architecture.
Ph5	Enhanced Autocomplete	Tab/arrow nav, Incarnon priority, recents.
Ph6	Intelligent Ranking	Frame/doctrine/shard-aware weapon suggestions.
Ph7	Doctrine Intelligence	Weak build detection, arcane/shard recommendations.

Ph8	Predictive Search	Fuzzy match, typo correction, alias recognition.
-----	-------------------	--

Open Issues

ISSUE	NOTES
Qorvex — no build data	Use detail page loadout editor to populate.
3 frames missing cultivation_color	Name mismatches in seed script. Fix + re-run.
cultivation_school + cultivation_avatar	Verify columns exist + populated in Supabase.
Click-to-edit panels	Remove top-right buttons; click panel → opens editor.
Incarnon toggle	Architecture defined. Build next session.
Genesis records in dropdowns	DB keeps them; UI must hide them.
Shard buff metadata	Final architecture: color + tau + specific buff per slot.
School page architecture	Routing, animated effects, thematic backgrounds TBD.

Key Design Decisions

DECISION	REASONING	SES
Home→Detail→Edit flow	All editing contextual inside detail page	003
Incarnon toggle not variant spam	One weapon + toggle; avoids clutter	003
Genesis records in DB, hidden UI	Needed for intelligence layer only	003
wf_base / wf_user split	Reference data vs personal configs	003
SCHOOL_ICONS centralized	Schools/symbols/colors/doctrine synced	002
Cinematic UI over dashboard	Codex OS identity, not spreadsheet	002
Volt: #5A6472	#161D23 too dark on black UI	002
Nidus: #4A0E0E	Mastery over infestation, not chaos	002
JSX wholesale replacement	Partial patching causes parse failures	003
Colors visible on dark theme	Identity + readability both required	003

Session Log

Session 000 Initial Foundation	2026-05-10 · ~4–5 hrs
• Migrated from SSMS/FastAPI to Supabase • Deployed 7-table Postgres schema • ETL migrated 57 frames + 10 KPM sessions from Excel • Built React + Vite frontend, card grid, shard editing, useFrames hook	
Session 001 Goal Tracking & Workflow Systems	2026-05-10 · ~4–5 hrs
• Refactored App.jsx into component architecture	

- Built NOW vs GOAL with separate Supabase persistence
- Added Copy Goal → Current and Copy Goal → Another Frame
- Added clear slot / clear all current shards

Session 002 Cultivation Color System + Cinematic UI

2026-05-11 · ~7–9 hrs

- Generated cultivation codex: 57 frames × 14 schools
- Added cultivation_color, cultivation_school, cultivation_art to DB
- ETL seed script — 54/57 frames seeded
- Built school filter bar and cinematic BuildDetailOverlay
- Platform: build tracker → cinematic cultivation codex OS

Session 003 Cinematic Architecture + Weapon Intelligence

2026-05-11→12 · ~12 hrs 10 min

- Cinematic detail page with hero banner, doctrine, arsenal, shards
- Navigation shift: Home → Detail → Edit (homepage = browse only)
- Edit Arsenal and Edit Archon Shards separated inside detail page
- Copy Goal → Current implemented
- wf_base.weapons created, seed_weapons.py built, 634 weapons seeded
- WeaponInput component + useWeapons hook + keyboard navigation
- Incarnon architecture: base weapon + toggle (not variant spam)
- Native Incarnons flagged: Laetum, Phenmor, Praedos, Felarx, Innodem, Onos, Ruvox, Thalys
- Roadmap expanded with Phases 5–8
- LONGEST SESSION TO DATE — major foundational architecture session

Warframe Jarvis — Living Document. Updated after every session. Never rewrite history — only append.
